

YUKO Hair Straightening by phiten

G-CREAM STRAIGHT *Step By Step Technical Guide*

1

HAIR ANALYSIS

Check the type of hair, chemically treated history and the damage degree differences between the roots and the hair tip. Select appropriate solution based on hair analysis guide.

Hair Analysis Guide Check the strength of the hair when is wet

Damage Degree	Virgin to Low damaged hair	Low damaged to Mid-damaged hair	Mid-damaged to Highly damaged hair
Hair Strength	Not extended when pulled	Extended if pulled	Extended without force
Solution	Cream H		Cream S
Process Time	20 to 10 minutes		15 to 5 minutes

2

SHAMPOOING

Shampoo gently with **YUKO Shampoo Series**. ※Apply conditioner for entangled hair

KokoroG Shampoo /Treatment
Volume with Light Texture.
Safe on sensitive skin.

Lock In Color Shampoo /Treatment
For Normal to Colored hair.
Contents helps prolong the richness of color

Cleansing Shampoo
For normal to oily hair.
Clean scalp while moisturising hair.

3

PRE-TREATMENT

Spray a generous amount of **AQUA G BASEWATER** on the entire hair.

- Spray **NANO KEEP** over damaged area.
- Apply **NANO BASE** after **NANO KEEP** over highly damaged area.

AQUA G BASEWATER
Keep hair enriched and moisturise through maintaining water balance.

NANO KEEP
Protect the hair from chemical agent used in the solutions.

NANO BASE
Extra protection over highly damaged area.

4

APPLYING THE SOLUTION 1

Using brush, apply Solution 1 approx.1 to 2 cm away from scalp and in 1.5 to 2cm sub-sections. Cover the hair with plastic wrap after applying the solution.

Refer to hair analysis guide for process time >>

Guide for solution amount

Short Hair	Semi-Long Hair	Long Hair
80g to 100g	100g to 120g	120g to 150g

Elasticity check

Pick a bundle of processed hair with 5mm width, wipe off the solution, wrap the bundle around the finger twice then remove your finger.

- Criteria for Elasticity
1. Hair is not ready if loop breaks up completely
 2. Loop is semi-loosen - Good for maintaining soft natural looking curl
 3. Loop stays as it is. - Good for originally curly or strong frizzled hair.

5

INTERMEDIATE RINSE

Starting from nape, rinse out the solution thoroughly.
※For entangled hair, apply conditioner.

6

BLOW DRYING AND IRONING

Spray a generous amount of **AQUA G BASEWATER** and then **NANO THROUGH** on entire hair.
Blow dry the hair until it is 80 to 90% dry.

NANO THROUGH
Protect the hair from heat of hair iron and dryer.

Iron Operation

- 1.Take 1 to 1.5cm mid section, pull out the hair gently 90 degrees against scalp, then slide the iron along hair.
 - 2.For mid section, slide the iron along with hair streaks (hair falling direction).
 - 3.Bundle some mid sections and iron for tip of hair.
- ※Lower the iron temperature based on hair damage level.

REPAIR IRON

Refer to guide for iron temperature for appropriate iron temperature ✕

Guide for iron temperature

Damage Degree	Virgin Hair / Low Damaged hair	Low damaged to Mid-damaged hair	Mid-damaged to Highly damaged hair
Iron temperature	180C	180C to 160C	160C to 130C
Paper iron temperature	—	Under 180C	Under 160C

7

APPLYING SOLUTION 2 (NEUTRALIZER)

Using brush, apply the neutralizer 1 to 2cm away from scalp and in 1.5 to 2cm sub-sections.
(The amount needed is the same as Solution 1)
Leave treatment for 5 minutes.

What is Paper Iron?
The heating plates of the iron are wrapped by Iron Paper with even tension.Iron Paper absorbs moisture within thus moisturizing the hair better and thoroughly

Iron wrapped with iron paper

8

RINSING OFF SOLUTION 2

Rinse off completely the solution and apply conditioner.

9

FINISHING

Spray **AQUA G BASEWATER** and then **NANO THROUGH**. Style hair with dryer.
※Styling by iron press makes the straightening effect last longer.

10

HOME CARE ADVISE

Ask the client to refrain from shampooing her hair for the next 24 hours
Advise the client to do Home Care Treatment according to her hair type.
